

3.29.19

Technology can help us out
In oh so many ways
So this week we'll be taking time
To sing the X-ray's praise!

An X-ray uses radiation waves
To see inside
Within the body cavity
Where lots of problems hide

Not just for bones!
This great machine can show us the outline
Of organs like the heart and lungs,
Bladder, or intestine

If they're enlarged or misshapen
This helps Doc diagnose
Problems like heart disease
Or even nasty bladder stones

We use materials like dyes
Or even just plain air
To sharpen images we take
And make them crystal clear

So now you know -
X-rays are more than just pictures of bones
They show Doc what he needs to treat
So your cat can go home!

Howdy folks! Raptor here reporting from 1809 Magazine with our first post in a series - that's right, this month we're telling you all about the amazing technology Doc and his team use at the Cat Practice to diagnose and treat your kitties! For everything from abdominal disease to arthritis, X-ray imaging allows us to see the size and shape of internal organs as well as muscles, bones, and even foreign objects. We're so thankful for this technology, since it helps Doc provide the best possible care for all kitty problems big or small. Stay tuned to hear about more of our awesome medical technology over the next few weeks!

Over and out,

Raptor 🐾🐾
