

4.12.19

An Echo's more than just a sound
That bounces back to you
It's used in medicine as well
To find important clues

Specifically it's used to take
A look inside the heart
This helps us diagnose what's wrong
And get a good head start

Doc checks for shape and size as well
And if the valves are clear
To keep your cat's heart ticking strong
For many happy years!

If there's a problem there to see
The echo shows us where
Which means that Doc can intervene
And make heart problems rare

As you can see the Echo really is
A heart's best friend
From kitty cats to humans too
We're grateful to no end!

Over and out,
Raptor 🐲
