

4.19.19

We've heard about technology
That helps Doc do his work
But there's one more to talk about
And trust me, it's no joke!

The lab tests that we do, you see
Can give us lots of clues
About your kitty's health -
Their diet and their organs too!

Your kitty's blood can tell us
If their lungs are working right
Or if we need to change their food
To help them feel alright

A urinalysis will tell
If the kidneys are healthy
And stool samples are used to find
The bugs too small to see

Our lab work is the best defense
To catch health problems fast
So call us up for more info
You only need to ask!

Over and out,
Raptor
